

Are you running FIDO Compliant Authentication?

The World has a Password Problem.

How secure is Authentication? The number of data breaches is on the rise. Attacks against SMS OTPs are increasing. Two factor security is so broken that hackers can now drain bank accounts!

The Solution : We need a new authentication model.

Open standards for simpler, stronger authentication using public key cryptography

emAS is FIDO compliant and allows password-less authentication for access to websites.

- No need for storage of passwords, OTP etc.
- Seamless authentication using Open Standards
- Usage of cryptography for highest form of security

For more information on emAS, please download the brochure
