

Centralized Authentication Engine for BFSI

As per a recent *Forbes** study, BFSI companies are 300 times more vulnerable to cyber-attacks than businesses operating in any other sector. Don't you agree? Then the following figures should clear the air. While a typical business in the US is attacked 4 million times per year, this number jumps up to over 1 billion times per year when you consider BFSI companies in the country.

Staggering isn't it? But the bigger question is how do you safeguard your financial services and provide foolproof security as well as convenience that your customers demand in such a challenging environment? The answer to this question is through the utilization of multifactor authentication engine provided by eMudhra called emAS. emAS supports over 15 modes of authentication including Mobile App OTP, Facial Recognition and Adaptive Authentication using AI. The fact that 30 large banks use emAS, to process over 10 million authentications is a testimony to the prowess of this highly scalable offering.

Here are some of the unique features of our unique MFA solution:

- Centrally managed Admin portal
- Automated audit logging of all key events
- Risk based authentication using AI
- Standard driven, online APIs for easy integration with other systems
- Platform agnostic
