

Reduce TAT for Loan Processing and Approval by up to 70% Using emSigner

The loan processing process is synonymous for being cumbersome and paper-intensive. But not anymore!

Using our PKI driven paperless office solution—emSigner—which supports strong automated workflow capabilities, you can seamlessly streamline workflows for loan processing, where the review and approval process will no longer be paper-driven. Rather, digitization of the entire process will reduce the overall TAT for processing and approving loans by up to 70%.

Here are some of the salient features of emSigner:

- emSigner allows the internal bank officers to approve loan applications in bulk in less than 5 minutes
- emSigner supports collaborative review of loan application
- All the data is encrypted using PKI infrastructure to ensure the authenticity and integrity of the application which is transmitted
- emSigner can be easily integrated with client's existing back-end systems (using API integration)
- Support for eStamping process and multi-party workflows
- Support for video as well as other popular forms of KYC
